

AudioPrism

High-Performance Audio Products

Power Foundation™ Series

Centralized Power Distribution & Filtration Systems

AudioPrism has been producing innovative power products since the introduction of the **ACFX™ Power-Line Filter** and the **Quietline™ Noise Reduction System** in 1993.

Unlike many power line filters which limit current or otherwise restrict what type component that can be connected to it, the **ACFX™ Power-Line Filter** enables any attached component, even an amplifier to perform at maximum dynamic range with maximum filtration. The **Quietline™ Noise Reduction System**, another **AudioPrism** innovation, passively shunts noise commonly found "riding" on power lines throughout your listening environment.

Now included in the **AudioPrism** power product family is the **Power Foundation™ Series** of centralized power distribution and filtration components. The **Power Foundation™** features technology found in both the **ACFX™** and the **Quietline™ Noise Reduction System**, with an entirely new industrial design that enables every component in your system to benefit from power line noise reduction.

Power Foundation™ is available in three different models to address any installation requirement. All have eight low contact resistance, industrial grade, Hubbell™ outlets, a noise-free magnetic circuit breaker and a detachable four foot **Foundation HC™ High Current Power Cord**.

Power Foundation Ia

Two of its eight outlets are dedicated for use with digital electronics (*engineered to keep digital noise from radiating back on to the power line.*) All outlets provide **Quietline™** filtration. Reduces noise from TVs, microwave ovens, computers, power tools and other household electrical noise sources. Features include a proprietary damping circuit; high current capacity with resettable circuit breaker and detachable power cord.

Power Foundation IIa

Two of its eight outlets are dedicated for use with digital electronics (*engineered to keep digital noise from radiating back on to the power line.*) All outlets provide **Quietline™** filtration and share the benefits of one **ACFX™**. Dramatically reduces noise from TVs, microwave ovens, computers, power tools and other household noise sources. Features include a proprietary damping circuit; high current capacity with resettable circuit breaker and detachable power cord.

Power Foundation IIIa

Is the flagship, providing **Quietline™** filtration and two sets of **ACFX™** high current, in-line, rugged EMI/RFI/line-noise suppression filters. Six outlets share the benefits of one **ACFX™** (*four outlets for analog source and two dedicated for digital.*) The remaining two outlets on their own **ACFX™** provide isolation for power amplifiers. Features include a proprietary damping circuit; high current capacity with resettable circuit breaker and detachable power cord.

Foundation HC™ High Current Power Cords

The Foundation HC Power Cords are manufactured by AudioPrism with 3x10 gauge, silicone insulated, high conductivity multi-strand copper conductors that are terminated with industrial grade Hubbell connectors. (*also available in six, eight, ten and twelve foot as well as custom lengths.*)

Specifications

Voltage Rating: 100-250 VAC, 50/60Hz.

Current Rating: 90-125 VAC, 20 amps RMS, 50/60 Hz.
180-250 VAC, 16 amps RMS, 50/60 Hz.

Breaker Type: Magnetic

Breaker Capacity: 20A @ 120 VAC

Power Cord Connector Capacity: 15A @ 120 VAC

Dimensions: 16 x 4.25 x 5" (6.30 x 1.67 x 1.97 cm)

Weight: Foundation Ia: 7 pounds (3.18 kg)

Foundation IIa: 9 pounds (4.09 kg)

Foundation IIIa: 12 pounds (5.45 kg)
